Fall 2018 Culligan Water Guide

Better Drinking Water at the Push of a Button

Wanting the refreshing taste of bottled water without leaving your home?

Until recently, having a Reverse Osmosis (R.O) water system installed in your home required forfeiting your soap dispenser or drilling into countertops. **Culligan's CleerLink Pro** gives you a wireless control button to provide you with bottle quality water directly from your kitchen faucet. Now, you are able to clean your vegetables, give recipes a more flavorful taste, and enjoy your favorite beverages with just a **push of a button**.

The Culligan® Mineral Boost Cartridge was designed for the **Culligan® Aqua-Clear®** Reverse Osmosis Drinking Water System to deliver the same high quality, reverse osmosis water with a new pH balance benefit! The Mineral Boost cartridge adds just the right amount of natural calcium minerals back into reverse osmosis water to create amazing tasting, pH balanced water. The Culligan® Mineral Boost Cartridge has a slow, controlled release of minerals. It does not have large spikes and dips in TDS that can lead to inconsistent pH levels and chalky water.

Don't keep Culligan Water a secret!!

Share your love of Culligan with your loved ones.

Culligan Water as featured on "Make This Place Your Home"

"Make This Place Your Home" (www.mtptyh.com) is a weekly series that shows viewers how to turn their place into a home whether it's new home construction or a new addition. The show is hosted by Jackie Zeman (Nurse Bobby Spencer from the daytime soap opera hit, General Hospital) and Jaime Laurita (Rock & Roll Chef and Kitchen Designer to the Stars).

Culligan Water and how we transform water throughout the home was featured during the half hour premier episode on September 29, 2018.

How Do You Know If You Need A Water Softener?

Look around your home for some of
the most common hard water signs:

- Mineral-like crust built up around your faucets or on your shower head
- Soap scum build up in your sinks or on your shower walls
- Stiff clothing after a load of laundry
- Irritated or dry skin and dull hair after showering

Culligan Water Conditioning of:
Hagerstown, MD; Harrisonburg, VA;
Roanoke, VA; and Ruckersville, VA

"The water pressure is working good.
Line had some trash in it; he cleaned
it out and it's working good.
You did a really good job!"

Joe, Virginia

"It works in making my skin feel like silk
after a shower and my shower doors
stay much cleaner than they use to!"

Cheryl D., West Virginia

"We have lived in our home since 1979 and our water
system was our first major purchase. We've had an
additional 2 installed since that time. As far as we
are concerned, Culligan is the best and we have
made several referrals to our family & friends."

Ottis & Janet L.; Maryland

"The products keep my water tasting great and
washing soft. Keeps my water heater from
rusting from the water here, in West Virginia.
Whenever I call for service, Candy always is
courteous and services requested are scheduled
within days. Technicians are prompt, courteous
and the service is great!"

PROBLEM WATER?

By Touch	By Taste
Dry, Itchy Skin	Bitter
Hard Water / Poor Quality	Effervescent
Limp, Lifeless Hair	General Bad Taste
Soap Scum or Residue	Salty
Spotty, Cloudy Glassware	Sour
Stiff, Scratchy Laundry	

By Smell	By Appearance
Chemical	Cloudy or Heavy Sediment
Chlorine	Lime Buildup or White Scale
Fishy	Low-Performing Appliances
General Bad Smell	Soap Scum
Musty, Earthy, or Grassy	Spots on Glasses
Sulfur or Rotten Eggs	Stains or Colored Water

By Contaminant	
Arsenic	Nitrates and Sulfates
Bacteria or Cysts	Perchlorates
Chlorine	pH (acidic/alkaline)
Fluoride, Chlorides, or Sodium	Total Dissolved Solids (TDS)
Hydrogen Sulfide	Turbidity or Particulate
Metals	Volatile Organic Compounds

Hard water is water that contains a high concentration of dissolved calcium and magnesium. It is classified as “hard” when calcium carbonate concentration is generally 61 milligrams per liter and above. While drinking hard water with a moderate concentration is relatively safe, it does have a greater impact on your working water. Working water is the water you use to bathe and clean with. Signs that you may have hard water running through your pipes are dry skin, sticky or dull hair after a shower, as well as mineral residue left on dishes after a dishwasher cycle.

OR

Problem water refers to water that holds specific water contaminants. This can include high concentrations of iron in water, which can cause staining, or sulfur in water, which can give water a rotten egg smell. Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) are also possible water contaminants in problem water and can be extremely harmful to ingest.

Culligan Water™
WORDFIND

You may just have problem water or hard water, or a combination of both. Different water filtration systems can address specific water problems. For instance, the Culligan HE Sulfur- Clear Water Filter is especially fitting for problematic water because it treats specific water contaminants that reduce unpleasant odors in water. The Culligan HE Water Softener focuses more on softening hard water issues. If you think you might have a hard water or problem water issue but aren't quite sure which one it is, call on Culligan. We'll figure out exactly what's coming out of your faucet and provide a customized solution to help you enjoy quality water throughout your home.
