Live More Sustainably. Everyday!

If you want to make small changes in your daily routine check out these tips:

- Reduce Household Energy Consumption
- Be a Smart Shopper
- Monitor Your Water Usage
- Reduce Your Plastic Bottle Usage
- Go Paperless
- Take Public Transportation

Tap Water VS RO Water

Article taken from Culligan.com

We all know how important tap water is; we use it to drink, cook, and clean with. But when our tap water is funky, it can make you think about the quality of water you're using on an everyday basis. And, with a handful of options, ranging from faucet-mounted filters to under-sink systems. So, what's the best way to filter your tap water?

Tap Water Filter

One of the easier/quickest options is a faucet-mounted water filter. These are often used to remove chlorine taste/odor. Some of these use activated carbon to get some of the contaminants out, however, they do not remove all water problems, such as viruses, bacteria, arsenic, or dissolved solids.

RO Filtration System

Reverse Osmosis Drinking Water Systems are one of the most effective water treatment systems because they can tackle a range of problems, such as: dissolved minerals, lead, arsenic, viruses & bacteria, volatile organic compounds (VOCs) Each of Culligan's RO systems are catered to your specific water issues or problems.

A few things to consider before investing that the CDC compiled:

What can the filter remove?

Is it certified to NSF standards?

What is your budget?

How much water do you need?

How convenient is the water treatment option?

Is your water leaving you confused?

Funky taste?

Awful smell?

Seeing floaties or just doesn't look like water?!

There When You Need It

Drinking Water Week
May 2-8, 2021

Article taken from AWWA.org

National Drinking Water Week is kicking off May 2-8, 2021. This year's theme is "There When You Need It." This topic was chosen to spotlight the professional water workers who dedicate their time to make sure that our drinking water is accessible when ever we may need it. In fact, within the last century, one of America's greatest achievements was implementing water treatment and disinfecting drinking water.

Is it time to:
Change filters?
Add salt?
Service Equipment?
